PROJECTS

Code-Bono [Link](#)

May 2018

- Platform for non-profit organizations to post proposals and developers to collaborate on those proposals
- Integrated a working video/text chat for each project with Socket.io and WebRTC libraries, allowing users to collaborate on one page
- Designed the front and backend routes for the sign up of users/organizations and appropriately handled the redirection to their respective home pages
- Aided group members in the creation of our database models and associations
- Developed the home page and edit page for organizations
- Developed the page for organizations to post and edit proposals and integrated their post/put requests into our database

Lee-sten [Link](#)

April 2018

- Customizable soundboard web app built using React
- Integrated multiple React libraries to implement various features such as, dragging audio files into keys, recording custom sounds, and having a YouTube player to load backing tracks

Graceshopper [Link](#)

April 2018

- E-commerce site created with React, React-Redux, Semantic UI.
- Integrated Stripe API to handle real-time card payments and save order details to the database
- Created the past orders page and handled front and back end routing to accurately display the required data
- Assisted in building the all products and single products page, both front and back end aspects
